

Our range of designs is almost infinite and can only be limited by your imagination. Combining our experience with your outdoor needs can deliver you the lifestyle you have always dreamed about.

Areas can be covered up to 9 metres wide and any length you wish. We can confidently design patio spaces over 8.4 metres wide without columns other than at the outside edges. Enjoy your patio free of obstructions, so you can place furniture wherever you please.

Panorama Patios can ensure the design is innovative, functional and decorative while complementing your existing home. Enjoy your entertaining area from the day we finish building, until the time you choose to move. Even then, you can enjoy the benefits of added value your home retains from choosing the best home improvements.

Steel

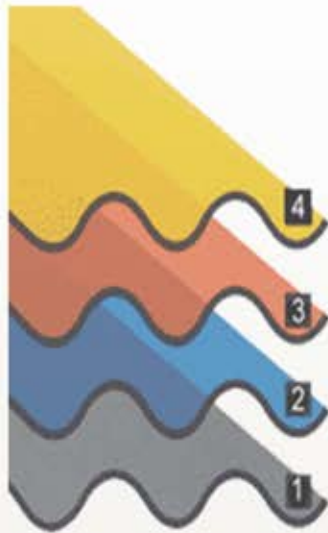

You can feel secure knowing our product is a unique, fully-engineered steel product. We utilise only colour bonded steel. Our products are manufactured and engineered by **Stratco**, the Australian patio giant. The colour bonding process uses numerous coats and withstands most of Australia's harshest climate conditions.

For more than 40 years, colour bonded steel has revolutionised Australian building design, transforming our homes and our workspaces along the way. By reflecting more of the sun's heat, **Stratco Outback** helps reduce the punishing Australian climatic extremes, while making your patio cover cooler and more pleasant to relax under.

Enjoy the stylish good looks and long-lasting benefits of investing in the premium patio system - **Stratco Outback**.

Panorama Patios only use steel. We do not combine different types of metals, thus avoiding weak points in the structure. Our beams are made from rolled high-tensile steel to ensure that your home improvement is durable and tough, while remaining beautiful for many years to come. The result is a sleek, strong and long-lasting finish.

How Colorbond is made

COLORBOND® steel combines the best of modern steel making technologies, developed over decades by **BlueScope Steel**.

1. The process starts with a **ZINCALUME®** steel base. **ZINCALUME®** steel has a zinc/aluminium alloy coating that delivers outstanding anti-corrosion performance.
2. A conversion layer is then applied to the surface of the steel to improve adhesion.
3. Followed by baking a polyester primer onto the surface.
4. Finally, the top coat is applied - a specially developed, exterior grade paint that is baked on to ensure maximum resistance to chipping, peeling and cracking.

The latest **COLORBOND®** steel innovation is Super Polyester coating technology, ensuring the painted finish retains its new look for longer.

Engineering

The engineering for our products caters to a wide range of structures and sizes. This is generally adequate for most designs undertaken by clients. For the adventurous client we can offer exclusive engineering for a very reasonable rate.

To further substantiate the design, construction and superiority of the **Stratco Outback®** installed by Panorama Patios, you have the peace of mind of a 15-year structural guarantee. As it is a complete system, all components must be supplied by **Stratco** for the guarantee to apply, when installed by a **Stratco Authorised Dealer**.

Only the **Outback®**, manufactured by **Stratco**, has all of these features. Only the genuine **Outback®** has the innovative design and the support of this national manufacturer.

Our engineering is independently designed to at least the following Australian & international Standards.

- AS3600 - 2001
- AS/NZS 4600 - 2005
- AS4100 - 1998
- AS/NZS1170.0 - 2002
- AS/NZS1170.1 - 2002
- AS/NZS1170.2 - 2002
- AS4055 - 2006
- AS1562.1 - 1992

*Enjoy the great outdoors, out back of your home.
Insist on the **Stratco Outback®***
